

Instruction:

- Determine Customer Unit Purchase Price
 - Equipment Price
 - Freight & insurance charges
 - Import tax and fees
 - Sales tax / VAT
- Customer Unit Purchase Price

- Find the chart that shows the consumption closest to your monthly oxygen consumption.
 - In that chart locate your equipment price, go vertically up until you find the line of the oxygen price you pay, then go the left.
- You will arrive at your savings!

Comments:

- Equipment Operating Cost = Depreciation + Power + Maintenance Cost.
- Calculations based on 10-year life cycle.
- With proper maintenance, equipment will last significantly longer.
- DOCS 120-21-CPO high pressure booster production rate = 3.75 m³/hr
- Calculations based on \$0.15 / kWh electricity rate.
